red tape...

people who care about your business...

Other companies we have dealt with in the past, don't seem to appreciate that every site is different and we don't all conform to a specific tick box...

Area Manager, Quarrying

About us

Stevens Equipment Rental, previously known as Peter Stevens Dumptruck Hire Ltd, has developed an impressive record over the last forty years in the construction rental industry. Today, we still maintain the same excellent reputation for great service and product knowledge.

In 2008 the company expanded its operations and in addition to renting out Volvo articulated dumptrucks its attention focused on 'long-term' self-drive contracts, with particular focus on wheeled loading shovels.

We now manage over 100 machines split roughly between 40% dumptrucks, 50% shovels and 10% material handlers/excavators/dozers. Given the diversification of machines, the company decided to drop 'Dumptruck' from the name and rebrand as Stevens Equipment Rental Limited.

SER remains a family owned and managed business which strives to deliver excellent service and value-for-money. The company ethos and reputation continues today and every effort is made to go beyond the customer's expectations.

Operating Equipment around the UK and Abroad

Our machines operate in a diverse range of environments from woodchip or coal re-handling in Scotland to salt mining and distribution in the North of England; from log handling in Wales to sand quarrying in Cambridgeshire - the nature and location of our work is vast.

The SER team have developed a wealth of operational experience, which is essential in specifying the right equipment for each environment. The fleet is serviced by our dedicated in-house service engineers who are supported by the manufacturers field service teams to offer an unrivalled level of support.

In addition to providing a nationwide service in the UK, recent expansion has seen long term contracts with machines placed abroad in Europe and Africa. Our proactive approach to contract management has ensured that the international side of the business continues to grow.

place...

service you can trust, from people who care...

It was essential to find a company who could maximise operational time and minimise inefficiency within our operation...

Operations Director, Power Generation

Articulated Dumptrucks

The majority of the dumptrucks in the fleet are manufactured by Volvo Construction Equipment with the remainder manufactured by Bell Equipment.

Volvo are the leading manufacturer in the ADT market and have an after sales support, second to none. With 40 years trading history between ourselves and Volvo CE, a long standing relationship has seen mutual benefits that result in a great service to our customers. Our standard specification for dumptrucks includes white noise reverse alarms, tropical fuel filters, green seat belt lights and fire extinguishers.

Machines on long-term contract are often modified to suit individual site requirements. This includes such features as having the body capacity increased for light materials, special tyre combinations to reduce wear, heated body kits fitted for cold environments and body liners for working with abrasive material.

Wheeled Loading Shovels

We have a variety of wheeled loading shovels in the fleet with around 50% being manufactured by Volvo and the remainder a mix of CAT, Bell Equipment and Liebherr.

Wheeled loading shovels in our general rental fleet are supplied to a high specification - often to quarrying standard including such features as green seat belt lights, reverse radar, reverse braking systems and weigh loaders. Long-term rentals are catered for on an individual basis, with some machines requiring additional corrosion protection systems.

Most wheeled loading shovels in the fleet are fitted with a hydraulically operated attachment bracket so that a variety of attachments can be used. This makes them extremely versatile as they can be used in many different applications.

There are a range of attachments available from general purpose buckets through to high tip buckets - which can be used for loading hoppers or bulk haulers. We also stock standard and extended length forks for both the L120 and L150 size quick hitch. These are rare to find in general rental fleets and are ideally suited to railway projects or other specialist applications.

Short-Term Rental

The machines that we supply are manufactured by the world's leading construction equipment companies such as Volvo Construction Equipment, Caterpillar, Bell Equipment and Liebherr.

We buy machines from new and generally run them up to a maximum of three years. This is so that the customer benefits from the most reliable part of a machine's life and experiences high utilisation with reduced risk of downtime.

The general rental fleet comes supplied to a high specification so that many different sites, customers and applications can be catered for. Machines employed on long term contracts are customised to the client's requirements - often with unique features such as greedy boards, fire suppression or corrosion protection.

Long-Term Rental

Many businesses choose to outsource their mobile plant requirements so that they can focus on their core business.

Heavy construction equipment can constitute a large cost to any business and by employing the expertise of SER to supply and manage machines, clients can benefit from a range of financial and operational benefits.

Around 50% of our fleet is currently engaged on long-term fixed cost contracts where machines are supplied, serviced and maintained by SER. This service solution ensures maximum uptime to the client whilst removing risks such as capital depreciation and disposal costs.

In addition to wheeled loading shovels and articulated dumptrucks we also have material handlers, dozers and excavators engaged on long-term contracts.

Specialist Services

Certain environments or materials can be unique in their challenge and standard equipment doesn't always meet this need. SER can design or modify equipment to solve the issues facing your business.

From structural work or unusual tyre configurations to the application of specialist paint to protect machines working with abrasive or corrosive materials. SER can help achieve a machine specification that matches your individual work environment.

Often these bespoke solutions are supplied on long term contracts meaning any additional costs involved in the design and development can be spread across the full term of the contract – removing any need for capital expenditure.

Sectors & Industries

The nature and diversity of our work is vast and covers many different industrial sectors.

In addition to quarry work, the dumptrucks are often employed on civil engineering projects that involve moving large volumes of earth - such as new road or wind farm construction.

The wheeled loading shovels will also be found in quarrying applications and also on any site involved with bulk handling of materials - such as coal, woodchip, salt or waste.

Any rail track or engineering work that is undertaken is often carried out over weekends using the specialist attachments that are available for the wheeled loading shovels. In addition, many long term contracts are located on sites that work 24 hours a day, 7 days a week.

SER appreciate that our customers operate in different environments and handle a wide range of materials. These are often unique in their challenge and the team are experienced to advise on supplying machines to any application in any location.
